In the specification:

Please amend the paragraph starting at p. 3, line 14, as follows:

Within a separated test analyst environment 82, a test analyst reviews test results 80 for the application 64 under test using a test results automation independent tool which compares the results of each automation run with bench files which have already been validated as correct. The automation tool ~~64~~ <u>84</u> visually displays this comparison for analysis and validation. In addition to bench results, the automation tool 84 can allow a test analyst to include in the comparison previous runs to see how the test results are evolving. This can be helpful to a test analyst to provide her analysis 86 of whether the software application is getting closer to the bench results.
